Liquid hydrogen is a key ingredient in rocket fuel. Where would you explore with a rocket?
Helium is used to make balloons rise. What would you do if you were lighter than air?

Draw your own balloon!

Where did my pet squirrel go?
Lithium is found in some natural hot springs. Where is your perfect place to relax and unwind?
Beryllium is used in satellites because it is so light.

What is something you know that communicates with a satellite?
Boron is a common additive in soap. Draw a rubber ducky in the scene above!
All plants have carbon in them. Draw a plant in the empty pot!
Liquid nitrogen can freeze things very fast. What is your favorite flavor of ice cream?
We breathe oxygen but it is also in water! Draw your favorite sea creature!
Fluorine can be found in toothpaste. What is your favorite flavor of toothpaste?
Neon is used to make bright neon signs. Design your own neon sign!
SODIUM

Pass the sodium?

Sodium is in the salt usually found on your dinner table. What's your favorite salty food?
MAGNESIUM

Find the four leaf clover!

Magnesium is needed to make chlorophyll, which gives plants their green color. What green foods do you like?
13

ALUMINUM

Aluminum is used in making soda cans.
Design a can above for your favorite drink!
Silicon is used in computer chips. What is your favorite thing to do on the computer?
15

PHOSPHORUS

Phosphorus can be found in matches. Draw a candle for the match!

A collaboration between @sciencetostreetart @fornowgonforever @wiscifest
16 SULFUR

Sulfur comes out of volcanoes. Draw a dinosaur by the volcano!
17

CHLORINE

Chlorine is used in swimming pools! What’s your favorite game to play in the pool?
Argon can be found in lightbulbs. Draw a lamp for the lightbulb above!
Potassium is an element found in bananas. What is your favorite topping on a banana split?
Calcium is found in your bones. What is your favorite bone?
Scandium is used in bicycle frames.

Draw the scenery for the bike race above!
Titanium can be found in submarines. If you had a submarine where would you go?
Vanadium is found in meteorites.
Draw an alien in the space ship!
Rubies are red due to added chromium. Color the rubies in red!
Manganese is used to keep safes strong. Draw a treasure that you would keep in a safe!
26
IRON

Iron is what knights used to make their armor strong.

Draw a dragon for the knight to fight above.
Cobalt is part of vitamin B12, which is found in fish. Draw your favorite fish!
Nickel is used in guitar strings. Draw the rest of the band!
COPPER

Copper can be found in dark chocolate. What is your favorite chocolate treat?
30
ZINC

Zinc?! What will the other coins say?

Pennies are covered in copper but actually are now mostly zinc!
Draw a good luck penny!

A collaboration between @sciencetostreetart @fornowgonforever @wiscifest
Gallium is used in mobile phones. Draw your favorite phone game on the screen!
Germanium is used in lasers. Where have you seen lasers before?
33

ARSENIC

This arsenic stuff is horrible!

Cough Cough Cough

Let's get out of here!

Cough Cough Cough

Arsenic is used in pesticides.
Draw an insect!

A collaboration between @sciencetostreetart @fornowgonforever @wiscifest
34

Selenium

Selenium was used to make the first solar cell.
Draw what you would power using the sun!
Bromine is used to develop pictures. Draw something you would want to photograph!
Krypton is used to create the flash in cameras. Draw yourself in the photo!
Rubidium is used as a standard to calibrate GPS devices. Have you ever been lost?
38
STRONTIUM

Strontium is used in fireworks to make red colors. Where is the perfect place to sit and watch fireworks?
Yttrium is used in some televisions to make red colors. Draw a scene with red on the tv!
Zirconium is used in jewelry. Design your own ring!
